Total understanding in providing...
... just one thing: profit

With 20 years expertise in the field Bartech has the largest world-wide customer base (+500 Hotels) which is a guarantee of our professionalism with +250,000 rooms equipped with Automatic minibars.

**Loss reduction**

Thanks to the automatic billing of charges your average loss percentage is reduced to an average 2% instead of 20-40% as with simple manual minibars. The reliability of our system leads to a drastic decrease in rebates and puts an end to disputes at the front desk.

**Labor savings**

Our refill report provides an accurate list of products to be refilled per room. This limits the rooms to be checked by your minibar attendants to those where products have been touched or consumed. This tremendously improves operating efficiency and also leads to decreased labor costs with 1 minibar attendant needed to refill 400 automatic mini-bars as compared to 4 attendants for manual minibars.

**Guest satisfaction**

Thanks to the information provided by our system, housekeeping staff no longer have to disturb guests to check in-room minibars. In case of a dispute, a short cut allows the front desk staff to easily check the status of products inside the mini-bar in real-time. Bartech also ensures an accurate stock control.

**Energy saving**

Bartech provides the C.E.S.S. function (Computerized Energy Saving System) as a standard feature to monitor cooling production per room according to room status; the hotel can minimize cold production in vacant or out of service rooms. This feature generates a savings up to 30% depending on occupancy and hotel's preference for the level of cooling.
